Full-stack Web Developer Oct 2022 - June 2023

Onesmarter Inc. ,USA, Virtual

Worked on www.cyberbriefs.org, a full-stack web application which collects cybersecurity articles from the internet and uses **React.js** for the frontend and **Django** for the backend API. Key features include article collection, integration with **ChatGPT** for article summarization, and a user-friendly interface.

Also, worked **PDF AI Rephraser** Application with functionality to give custom prompts using ChatGPT-4

Managed Deployment of above applications on Cpanel and AWS EC2 . configured SSL certifications.

Application Development	Dec 2021 - Mar 2022
Onesmarter Inc. ,USA, Virtual	
Built frontend for Android/iOS/Windows Application for company using Dart	
Maintained CRM application for company clients	
built web application for company (front and backend) using svelte framework	

College Website project

Jun 2022 - Jul 2022

Pes College of physical education official website

Our team of talented web developers accomplished the creation and hosting of an engaging and informative website for a college. Using HTML, CSS, and JavaScript, we designed a user-friendly interface with multiple pages to present a wealth of comprehensive content. The website boasts a responsive design, guaranteeing an excellent user experience on various devices. We integrated interactive elements, media, contact forms, and feedback mechanisms, resulting in enhanced user engagement and communication. By hosting the website on GoDaddy's cPanel, we ensured reliable accessibility to a broad audience. This collaborative effort culminated in a highly successful project that greatly enhances the college's online presence.
